CS 2310 Project Milestone 1
# Mao-Lin Li

__Title:__
A petri-net based simulation platform for sensor-cloud application.

__Description:__
In this project, we want to proposed a petri-net based simulation platform to simulate the behavior of sensor-cloud sysyem and further simulate a specific application i.e. authentication. We also want to provide a graphic user interface (GUI) that let users can configure their sensor-cloud system and observe the result of their application.

__Accomplishment by MS2:__
The prototype of simulation platform, the program should be simulate the basic behavior in sensor cloud with comman line.

__Accomplishment by Project Demo:__
The user interface should be completed, the application of sensor cloud also can be executed in final program.

__Plan B:__
The sensor-cloud modeling with petri-net shoud be completed. Including the basic behavior and its extra behavior for specific application.
